# WEATHER OF CONCERN

## Weather of Concern

- Cold temperatures are expected late tonight into Monday morning with temperatures dipping into the middle to upper 20s for several hours for portions of Northern California.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

Northerly flow aloft persists over Northern California. A closed upper low is dropping southward off the California coast, spreading a fair bit of high cloudiness over the region. This wasn't enough to deter strong radiational cooling across the area however, with widespread 20s being reported across the valley this morning, and teens and single digits over higher terrain. Cold overnight temperatures with early morning valley fog will continue to be the forecast for much of this week. By Tuesday or Wednesday, the air mass should warm just enough to bring valley low temperatures to above-freezing levels.

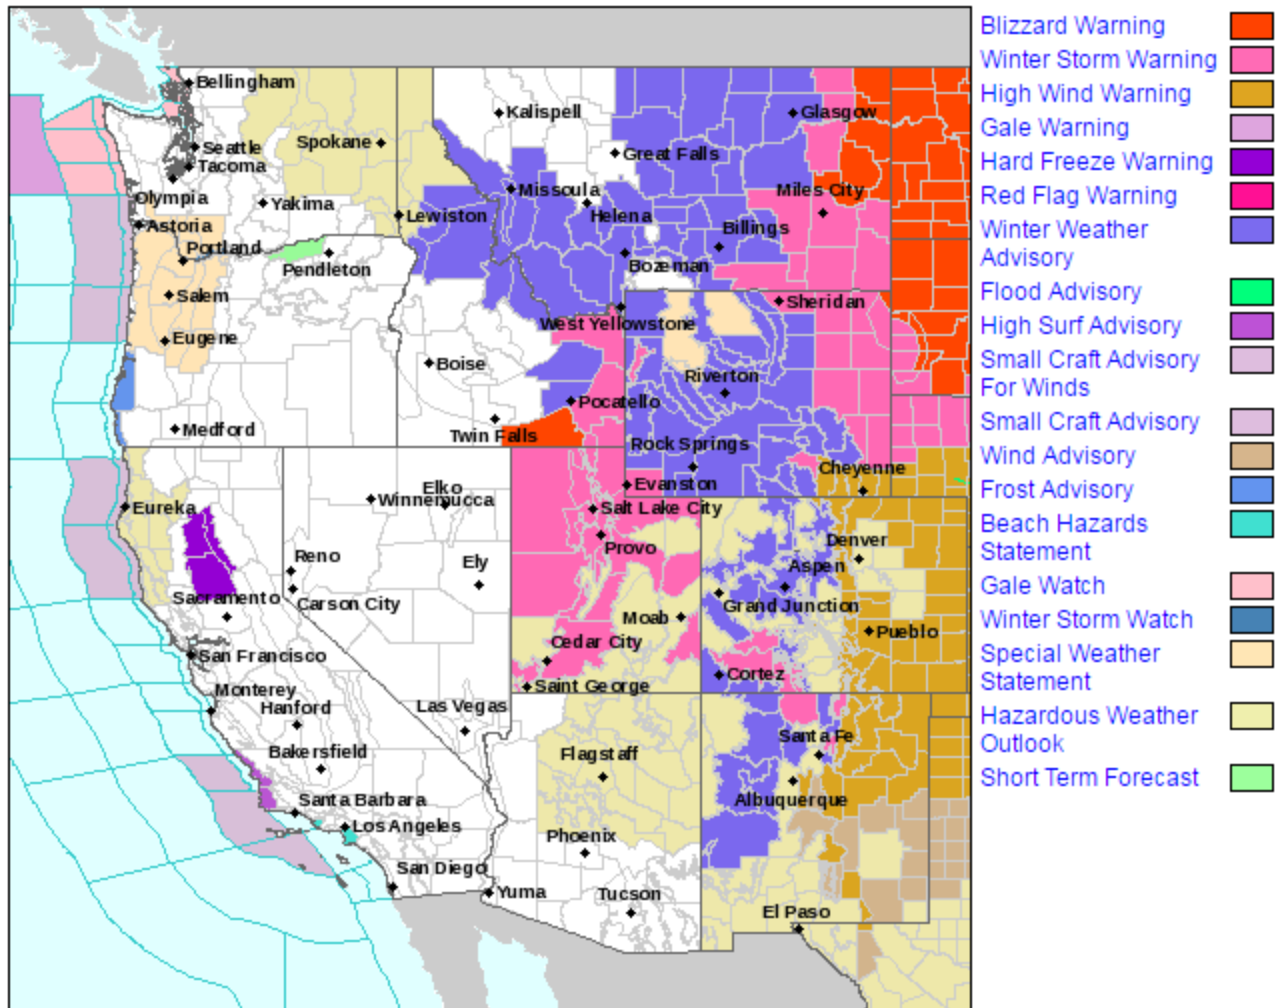

## **SOUTHERN CALIFORNIA**

It will be mostly sunny today except for some clouds and snow showers on the north slopes of the mountains this morning. It will be cool both today and Monday. Offshore flow will bring a warming trend into midweek. Northwest flow continues over the area although with much less moisture. The exception is the north slopes of the mountains where the northwest flow is scooping moisture up from the San Joaquin Valley and lifting it up the north slopes where it is turning into clouds and snow showers. The Winter Weather Advisory for the north slopes has been extended until 0900, otherwise today will be mostly sunny and cool with max temps 8 to 12 degrees below normal. A low will bring possible precipitation from Thursday into Friday night. Northwest flow continues over the area although with much less moisture. The exception is the north slopes of the mountains where the northwest flow is scooping up moisture from the San Joaquin Valley and lifting it up the north slopes where it is turning into clouds and snow showers.
